

Zetian (Neal) Wu

+1-(443)-630-2430 | zwu49@jhu.edu | neal-ztwu.github.io

EDUCATION

Johns Hopkins University

MSE in Data Science

MD, United States

Jan. 2020 – present

Zhejiang University

BS in Physics | Minor in Finance

Zhejiang, China

Sept. 2015 – Jun. 2019

RESEARCH EXPERIENCE

Research Assistant

Center for Language and Speech Processing

Apr. 2020 – present

Johns Hopkins University, United States

What is the Fact of Shap Value for NLP Models?
(*In progress*)

MultiBench: Multiscale Benchmarks for Multimodal Representation Learning
(Under review by *NeurIPS 2021*)

Lexicon Creation for Interpretable NLP Models
(Under review by *EMNLP 2021*)

Span Identification and Representation for Information Extraction

- Formulated entity mention detection problem under partially annotated datasets as a span ranking task, where a dedicated ranking loss is enforced to rank gold spans higher while not fully ablating unlabelled spans.
- Built an LSTM-based model to detect spans by conditioning on given spans, supporting extraction tasks such as event extraction.
- Investigated taking the SpanBERT-based coreference model as span proposal model to detect entity mentions, achieving recall above 0.9 and F1 score above 0.8 when finetuned with only a few training examples.

Research Assistant

Intelligent Computing & System Lab

Apr. 2018 – Aug. 2019

Zhejiang University, China

Anti-fraud Model for New Financial Leasing Services

(Top prize in *China Collegiate Computing Contest-AI Innovation Contest*)

- Constructed two kinds of features: one is obtained from Bipartite Graph as statistical features and the other is extracted from Unipartite Graph using DeepWalk model as node embeddings.
- Built supervised learning model (DeepFM) using Baidu's PaddlePaddle framework, increasing the anti-fraud ability of the new financial leasing services by 6% on AUC

Interactive Rare-Category-of-Interest Mining from Large Datasets (*AAAI 2020*)

WORK EXPERIENCE

Machine Learning Engineer

Hangzhou Enjoymusic Technology Co. Ltd.

Aug. 2019 – Mar. 2020

China

- Built a sequence-to-sequence model for music style transferring using TransformerXL and Discriminator.
- Formulated automatic music piece generation problem as a conditional sequence generation task that decodes MIDI sequence from drum beats, and modelled with VAE architecture.
- Refactored Typescript Midi-me(<https://magenta.tensorflow.org/midi-me>) codes using Python for integration with our own platform and application.

SKILLS AND ADDITIONAL INFORMATION

Programming/Framework: Python, PyTorch, TensorFlow, AllenNLP, Linux, C/C++, MATLAB, R, SQL

Awards: Top Prize in China Collegiate Computing Contest-AI Innovation Contest, Honorable Award in COMAP

Honors: 2nd Level in Training Plan of the National Basic Subject Top-notch Talent Scholarship
